

ECHO-COAT™

Soft Tissue Biopsy Needles with ECHO-COAT™ coating provide improved visibility during ultrasound-guided biopsy procedures. ECHO-COAT, Angiotech's patented echogenic coating, is a surface treatment which traps microscopic air bubbles, creating highly efficient ultrasonic reflectors.

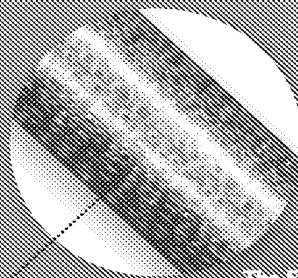

Features Include:

- ECHO-COAT coating improves ultrasound visualization at virtually any angle
 - Providing more accurate needle orientation
 - Decreasing procedure time
- Each needle has numerically ordered centimeter markings on the outer cannula to facilitate precise depth placement
- Color coded stylet hub indicates gauge size of needles

Soft Tissue Biopsy Needles with ECHO-COAT™ Coating

ECHO-COAT™ reflects the ultrasound signal even at extreme angles to the ultrasound beam.

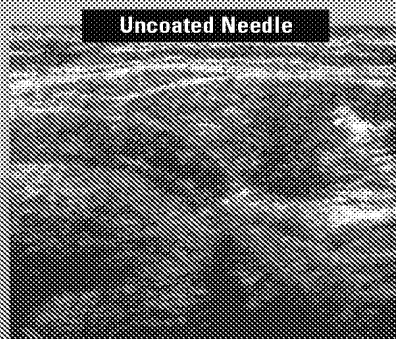

The ECHO-COAT coating, with unique porous microstructure for greatly enhanced ultrasound reflectivity.
